

🌸 **MERN Stack Internship- Task 1**

Basic React App + API

📌 **Task Description**

Build your **first MERN app** starting with **React frontend** and a **basic backend API**. You'll set up React, create a simple component, and fetch data from your Express + MongoDB API.

🔧 **Responsibilities**

1. Frontend (React):

- Setup React app (`npx create-react-app`).
- Create a **Card component** that displays product/user info.
- Use **props** to pass data.

2. Backend (Express + MongoDB):

- Create Express server.
- Build a basic **CRUD API** for "Products".
- Connect to MongoDB with Mongoose.

3. Integration:

- Use `fetch()` or `axios` in React to show data from backend API.
-

🎯 **Skills Gained**

- ✓ React basics (components, props, state)
- ✓ REST API development with Express
- ✓ MongoDB schema design
- ✓ Connecting frontend & backend

📁 Sample Starter Code

👉 React Component

jsx

```
function ProductCard({ name, price }) {  
  return (  
    <div className="card">  
      <h3>{name}</h3>  
      <p>Price: ${price}</p>  
    </div>  
  );  
}
```

👉 Express API

js

```
app.get("/api/products", async (req, res) => {  
  const products = await Product.find();  
  res.json(products);  
});
```

✅ Deliverable

A React app that displays data from an Express + MongoDB API.
